Join Us This Fall in Kelowna for an Unforgettable Conference Experience November 13 - 15, 2026

This fall from **NOVEMBER 13 - 15, 2026**, we are proud to bring our community together in one of Canada's most breathtaking destinations—Kelowna. Surrounded by rolling vineyards, sweeping lake views, and the vibrant colours of the season, our Fall Conference promises to be a standout event that combines professional growth, meaningful connection, and a truly memorable setting.

As our industry continues to evolve, staying informed, engaged, and connected has never been more important. This year's conference will be thoughtfully designed to deliver just that. Attendees can look forward to a robust program featuring expert-led sessions, hands-on workshops, and panel discussions that address the most relevant topics facing professionals today. From emerging trends and regulatory updates to practical tools and business strategies, every session is crafted to provide real-world value you can take back to your day-to-day work.

Beyond the educational program, the conference offers something equally important—the opportunity to reconnect. Whether you're a long-time member or attending for the first time, you'll be part of a welcoming and collaborative environment where ideas are shared, challenges are discussed openly, and lasting relationships are built. Networking events, social gatherings, and informal meetups throughout the conference will give you the chance to connect with peers from across the country, exchange insights, and strengthen your professional network.

And then there's the location. Fall in Kelowna is nothing short of spectacular. With its mild temperatures, golden vineyards, and relaxed pace, it's the perfect backdrop for both learning and leisure. Take advantage of your time outside the conference sessions to explore local wineries, enjoy lakeside walks, or simply

Join Us This Fall in Kelowna for an Unforgettable Conference Experience

November 13 - 15, 2026

unwind and take in the scenery. It's an experience that blends business and pleasure in the best possible way.

Whether your goal is to deepen your expertise, expand your network, or simply recharge in a beautiful setting, this conference delivers on all fronts. It's more than an event—it's an opportunity to invest in your professional growth while reconnecting with the community that supports and strengthens our industry.

Stay tuned for more details on registration, accommodations, and our exciting lineup of speakers. We look forward to welcoming you to Kelowna this fall for a conference experience that will inform, inspire, and energize.

The CAHPI Inspector

Message from the CAHPI President...

Peter Weeks NCH, RHI
CAHPI President

On behalf of the Board, I am pleased to announce that this year's national conference will be heading west to beautiful Kelowna from **Friday, November 13 to Sunday, November 15, 2026.**

As a truly national association, the Canadian Association of Home & Property Inspectors remains committed to serving members from coast to coast. We recognize that travel requirements can vary significantly across the country, and we continue to make thoughtful efforts to ensure our events are accessible, inclusive, and representative of our national community. Hosting this year's conference in Western Canada is part of that ongoing commitment—creating opportunities for members in all regions to participate, connect, and engage.

This conference is shaping up to be an outstanding event, bringing together industry professionals, thought leaders, and partners for a program focused on education, innovation, and collaboration. Whether you are a long-standing member or new to the profession, this is an opportunity to gain valuable insights, build relationships, and be part of the conversations shaping the future of our industry.

We also warmly welcome non-members to attend. If you've been considering getting more involved with CAHPI, this conference offers the perfect introduction to who we are, what we do, and the value of being part of a strong, national professional community.

In addition to a robust educational program, attendees will have the opportunity to experience all that Kelowna has to offer—from its renowned wine region to its stunning fall scenery—making this both a productive and memorable event.

Registration details and accommodation information will be announced shortly. We encourage you to watch for updates and plan to join us.

I look forward to welcoming you out west this November.

Fall in Kelowna: A Season of Colour, Flavour & Unforgettable Experiences

There's something truly special about fall in Kelowna. As summer crowds fade and the Okanagan Valley settles into a slower rhythm, the landscape transforms into a stunning palette of gold, amber, and crimson. Crisp mornings, warm afternoons, and harvest season in full swing make it one of the best times of year to visit—and to explore.

Whether you're extending your stay around a conference or planning a dedicated getaway, here are some of the best ways to experience Kelowna in the fall.

Sip Your Way Through Wine Country

Fall is harvest season in the Okanagan, and the vineyards surrounding Kelowna are alive with activity. It's the perfect time to visit local wineries, where grapes are being picked, pressed, and turned into the next vintage. Many wineries offer seasonal tastings, harvest dinners, and special events that celebrate the

region's world-class wine culture.

From relaxed patio tastings overlooking the lake to guided wine tours through the countryside, the experience is as much about the scenery as it is the wine. The cooler temperatures and vibrant vineyard colours make fall one of the most picturesque—and enjoyable—times to explore.

Explore the Great Outdoors in Full Colour

If you love the outdoors, fall in Kelowna is hard to beat. Trails come alive with colour, offering incredible opportunities for hiking and biking without the heat of summer.

One must-see experience is the Myra Canyon section of the Kettle Valley Rail Trail, where you can walk or cycle across historic trestle bridges surrounded by golden larches and sweeping valley views.

Closer to downtown, scenic parks and waterfront paths provide equally stunning views, making it easy to fit in a morning hike or evening stroll between conference sessions.

Fall in Kelowna: A Season of Colour, Flavour & Unforgettable Experiences

Taste the Harvest at Farms & Markets

Beyond the vineyards, fall is a celebration of local food. Orchards and farms are brimming with apples, pears, pumpkins, and squash, and many offer u-pick experiences, cider tastings, and family-friendly activities like corn mazes and hayrides.

Farm markets and local restaurants also showcase the season's bounty, with menus inspired by fresh, regional ingredients. It's the perfect opportunity to experience Kelowna's renowned farm-to-table culture.

Experience Festivals & Local Events

Autumn in Kelowna is filled with energy and community spirit. Signature events like the Fall Okanagan Wine Festival bring together wineries, chefs, and visitors for tastings, pairings, and celebrations across the region.

Other seasonal highlights include food festivals, beer weeks, cultural events, and even scenic runs like the Argus Apple Marathon, which winds through orchards and along the lake.

Whether you're looking for lively entertainment or a relaxed evening out, there's always something happening in the fall.

Unwind and Take It All In

Perhaps the greatest appeal of Kelowna in the fall is the pace. With fewer crowds and a relaxed atmosphere, it's the ideal time to slow down and truly enjoy your surroundings. Sip a glass of wine as the sun sets over the lake, explore charming downtown shops, or simply take in the crisp air and golden views.

Make the Most of Your Visit

Fall in Kelowna isn't just a season—it's an experience. From vineyard tours and outdoor adventures to local flavours and festive events, it offers the perfect balance of productivity and relaxation.

If you're planning to attend this year's fall conference, consider arriving early or staying a little longer. You'll discover that Kelowna in the fall is not only beautiful—it's unforgettable.

Smart Home Technology & Home Inspections

Wednesday, April 1, 2026
8:00 p.m. to 9:00 p.m. EST

Justin Hines, Synapse Smart Homes

This webinar will provide an overview of the types of smart home technologies homeowners are seeking—from basic systems to advanced integrations. The session will also highlight key considerations for home inspectors, helping them understand what to look for and how to properly advise clients as part of a comprehensive home inspection.

Geothermal Systems: What They Are, How They Work, and What Inspectors Need to Know

Wednesday, April 8, 2026
8:00 p.m. to 9:00 p.m. EST

David Brodrecht, P.Eng., B.A.Sc., M.S.A.A, Senior Geothermal Engineer, Senior Associate, WALTERFEDY

Geothermal heating and cooling systems are becoming more common in residential homes across Canada—but many inspectors are still unsure what they're really looking at on site.

This webinar will demystify geothermal systems by explaining how they work, the different types of installations (open loop vs. closed loop), and the key components inspectors should be able to identify during an inspection.

Participants will learn:

- The basics of geothermal technology and system operation
- Common system configurations and how to recognize them
- What inspectors should look for during a home inspection
- Typical defects, red flags, and safety concerns
- Reporting limitations and how to communicate findings clearly to clients

Whether you've never encountered a geothermal system before or want to sharpen your knowledge, this session will give you practical, field-ready insight to inspect with confidence and professionalism.

Perfect for home inspectors who want to stay current with evolving residential technologies and provide added value to their clients.

Net Zero Homes are here — are you ready to inspect them?

Wednesday, April 15, 2026

8:00 p.m. to 9:00 p.m. EST

Brett Cass, Technical Manager, Net Zero Housing, CHBA
Lynne Strickland, Director, Initiatives, Net Zero Housing

From solar panels and heat pumps to airtight envelopes and advanced ventilation systems, Net Zero Homes are changing the way houses are built...and inspected.

Join us for an informative webinar designed specifically for home inspectors, where we'll break down:

- What makes a home "Net Zero"
- Key systems and components you should understand
- Common issues and red flags to watch for
- Industry trends in hi-performance homes

Future-proof your inspection skills and stay ahead of industry trends with this must-attend session.

What the New National Building Code Means for Home Inspectors

Wednesday, April 22, 2026

8:00 p.m. to 9:00 p.m. EST

Greg Fairthorne, Technical Advisor National Research Council Canada

The National Building Code has been updated — and home inspectors need to know what's changed.

Join us for an informative webinar focused on the key revisions in the new National Building Code and how they impact residential construction and inspection practices. This session will break down the most relevant updates, explain their practical implications in the field, and help inspectors better understand evolving safety and performance standards.

Whether you're inspecting newer homes or older properties affected by updated requirements, this webinar will equip you with knowledge you can immediately apply to your inspections and reports.

Stay current. Stay confident. Stay inspection-ready.

CANADA'S VOICE OF THE HOME INSPECTION INDUSTRY

Standing Together to Support a Family After Tragedy

Annik and Joël Bouchard along with their two amazing daughters Marie-Eve and Amélie, lost their home and all their belongings in a devastating house fire. This is a family who have long been a pillar in the tight-knit village of Marionville and its surrounding community. They have always been ready to lend a hand and support others in times of need.

In the midst of this unimaginable loss, they were able to save something deeply precious: the ashes of their son, Marc-Antoine, who passed away in 2015. While this brings some comfort, everything else they built their lives around is gone. They are now facing the overwhelming reality of rebuilding from nothing, all while still in a state of shock.

This family has given so much to others over the years. Now, they need us.

Please consider contributing whatever you can to help them through this incredibly difficult time. No amount is too small—every gesture of support matters. And if you're unable to donate, sharing this page is just as meaningful.

Let's come together as a community and surround them with the same generosity, kindness, and support they have so often shown to others. Thank you sincerely.

Gofundme: <https://www.gofundme.com/f/standing-together-to-support-a-family-after-tragedy>

Reminder: Complete Your Member Renewal Credits (MRCs)

As a friendly reminder, one of CAHPI's objectives is to establish and advance a national standard for professional development, education, and advocacy for home and property inspectors across Canada. To this end, members are required to complete 20 Member Renewal Credits (MRCs) each calendar year. CAHPI has been lenient on this requirement since COVID but we will be implementing member audits to ensure compliance.

Why MRCs Matter

Member Renewal Credits are an essential part of maintaining your membership in good standing. A total of 20 MRCs is required each calendar year (January–December) and is reviewed at the time of membership renewal in June. Staying current with your MRCs not only ensures uninterrupted membership, but also reflects your ongoing commitment to professionalism, competence, and continuous learning within the home inspection industry.

What Counts as an MRC?

MRCs can be earned through any education related to home inspection, whether technical, professional, or risk-management focused. As a general rule:

- 1 hour of education = 1 MRC
- Education may be completed in-person or online
- All CAHPI webinars, courses, conferences, and approved training sessions all qualify
- Relevant non-CAHPI courses that advance your knowledge of home inspection

Members are encouraged to explore the [CAHPI e-learning portal](#), which offers a wide range of 1-hour, on-demand webinars covering relevant inspection topics. These webinars are free to members, accessible at your convenience, and are an easy way to complete outstanding credits on your own schedule.

Record-Keeping and Audits

Please note that supporting documentation is not required at the time of renewal, unless you are selected for a random audit. When completing your renewal, you will simply be asked to enter the total number of MRCs completed between January 2025 and December 2025. We do, however, recommend that members retain their own records in case verification is requested.

Need Help?

If you are unsure how many credits you have completed, need help accessing the e-learning portal, or have questions about what qualifies as an MRC, assistance is always available. Our team is happy to help guide you through the process and ensure you are on track before the deadline.

Thank You

Thank you for your continued professionalism and your dedication to advancing the home inspection profession. Your commitment to ongoing education strengthens not only your own practice, but the credibility and reputation of our profession as a whole. We appreciate your efforts and look forward to another successful year ahead.

Accounts frozen at two more Ontario brokerages as RECO uncovers trust account shortfalls

Courtney Zwicker | Mar 19, 2026

The Real Estate Council of Ontario (RECO) has frozen the accounts of two more brokerages, with an investigation uncovering more than half a million dollars unlawfully disbursed from trust accounts, it says.

The regulator reported on Wednesday that it has taken regulatory action against MEhome Realty (Ontario) Inc. and 515J Realty Inc. of Richmond Hill. The brokerages are led by Grace Nan Zhang, according to RECO's registrant search and Zhang's online profiles.

RECO said its investigation led to the discovery of a significant preliminary shortfall of approximately \$525,000 in the MEhome Realty trust account and approximately \$40,000 in the 515J Realty trust that the brokerages "have been unable to correct." RECO said the funds were used outside of the terms of the trust for brokerage operating expenses.

"While the inspection is still ongoing and the total amount of funds missing or unlawfully dispersed is still being confirmed, RECO is taking immediate action to freeze the accounts at both brokerages to protect consumers and real estate agents," said a public statement.

Roughly 130 agents are involved with the two brokerages.

The enforcement comes on the heels of two other notices of regulatory action brought on by RECO in recent months.

In February, RECO issued notices of proposal to revoke registration, immediate suspension orders and freeze

orders against four Save Max brokerages after a forensic review found \$2.7 million had been improperly withdrawn from trust accounts at the Mississauga-based operations. About 400 agents were affected. [Save Max is appealing the regulatory action.](#)

In December, the regulator froze accounts at Scarborough-based HomeLife Today Realty Ltd. after discovering a [\\$580,000 trust account shortfall](#).

Ontario's real estate regulator is pushing forward with sweeping reforms aimed at preventing future trust account abuses, with administrator and acting chief executive Jean Lépine announcing last week the [introduction of mandatory annual financial filings](#) for brokerages as part of RECO's oversight overhaul.

The appointment of a government administrator for RECO was prompted by the iPro Realty Ltd. trust account scandal last year and the [regulator's handling of it](#).

Millions of Canadian homes have high levels of cancer-causing radon. Is yours one of them?

Lauren Pelley · CBC News · Posted: Jan 28, 2026 4:00 AM EST | Last Updated: January 28

Recent building code update mandates radon mitigation in new houses, but many existing homes still at risk.

Roughly one in five residential buildings in Canada has high radon levels — a figure that's more than doubled since the late 2000s, re-search shows. (Patrick Morrell/CBC)

You can't see or smell radon, the cancer-causing gas lurking inside millions of Canadian homes.

Roughly one in five residential buildings in Canada has high radon levels — a figure that's more than doubled since the late 2000s — while radon-induced lung cancer kills an estimated 3,200 people each year, federal figures show.

This radioactive gas is released from the ground and flows into buildings across the country, but scientists say modern designs and renovations likely play a role in why [more Canadians are being exposed in their own homes](#).

"We are pretty good at keeping air inside of our homes because we want to keep the heat inside ... especially in this kind of cold climate that we live in," said Pawel Mekarski, head of radon technical operations at Health

Canada.

"A lot of the time when we are doing renovations and retrofits, we're typically trying to make the building more airtight, without necessarily introducing any sort of other ventilation."

There's hope that could change. A long-awaited update to the national building code, [just released in late December](#), requires newly built homes to include a passive radon stack, which acts like a chimney to help reduce indoor radon buildup.

Though that code sets out the guidelines for construction projects throughout the country, it still needs to be adopted by provinces and territories.

"We hope to see these systems introduced in future homes in Canada," Mekarski said.

The CAHPI Inspector

Millions of Canadian homes have high levels of cancer-causing radon. Is yours one of them?

Lauren Pelley · CBC News · Posted: Jan 28, 2026 4:00 AM EST | Last Updated: January 28

But what about existing homes that are at risk of having high radon levels? And how do you know if your own house is a danger zone?

How to test for radon in your home

Experts say the only way to know if your home contains a high amount of radon is to test for it.

The process is simple: You can either [hire a radon measurement professional or buy your own test kit](#). (Some communities provide free radon monitors through libraries or local public health units. You can find out more information through the federal Take Action on Radon program.)

[Radon gas may be giving more Canadians lung cancer. Scientists are racing to save lives](#)

[Health Canada recommends](#) testing your home for at least 91 days, and ideally for a period of three to 12 months to get the most accurate results. It's also important to test during the colder months when windows and doors are likely shut, trapping more radon in your home.

Installing radon mitigation systems

The current national guideline for indoor radon levels is 200 becquerels — the standard unit of radioactivity, which refers to the rate of nuclear decay — per metre cubed (Bq/m3).

If your home's readings hit that threshold, the Take Action on Radon program offers a [searchable list of certified radon professionals](#) who can install mitigation systems. These typically involve a pipe that runs from the foundation floor up through the roof, with a small fan attached, to draw radon outside before it can enter the house. Installations usually take a day or less.

[U of C study finds only one-third of households who identify elevated radon undergo mitigation](#)

[Radon levels in new Canadian homes now 467% higher than in homes in Sweden, U of C study finds](#)

The catch? In most regions, the cost of all that work falls on homeowners, amid a patchwork system of charity and government-based funding options.

Ontario covers radon mitigation work [through its home warranty program](#), with coverage lasting up to seven years after a home is built. In Manitoba, there's a unique financing program that allows households to [spread out radon mitigation costs over their hydro bills](#).

For those people paying out of pocket, the cost of mitigation systems can run anywhere from \$2,000 to \$5,000 and sometimes more, depending on the size, structure and location of the house.

'Cost is a significant barrier'

The cost of mitigation work is simply unattainable for many Canadians, says Sarah Butson, CEO of the Canadian Lung Association.

"We know that cost is a significant barrier to people actually taking action on radon," she added. "It can be a barrier to testing in the first place, because if you know that you can't afford actually mitigating on the other side of that, why test?"

['It's preventable': Cancer survivor spreads testing message at Saskatoon radon conference](#)

[Health Canada rejects claim that new radon gas standards put Canadians at risk](#)

The non-profit cancer advocacy group offers the only

The CAHPI Inspector

Millions of Canadian homes have high levels of cancer-causing radon. Is yours one of them?

Lauren Pelley · CBC News · Posted: Jan 28, 2026 4:00 AM EST | Last Updated: January 28

[cross-Canada grant program](#) to help offset mitigation costs for low- and middle-income households. Last year, it provided around \$150,000 in funding to roughly a hundred households across the country. Butson said that's just a drop in the bucket.

"The reality is that programs like ours are at capacity, and so we need more support to actually be able to fill that gap even further," she said.

Radon mitigation 'vital' to protecting families

Others say the cost of radon mitigation for homeowners is a small price to pay for peace of mind.

Dr. Kong Khoo, an oncologist with B.C. Cancer, was diagnosed with Stage 1 lung cancer himself in March 2020 during a routine medical exam.

"My first thought, that moment I heard that pathology report, was: it's got to be radon," he told CBC News.

After his diagnosis, Khoo installed a radon monitor in

his Kelowna home. Within days, he saw sky-high levels of 400 to 600 Bq/m³ — double, even triple the Health Canada threshold.

[Radon gas suspected in Prince George, B.C., family tragedy](#)

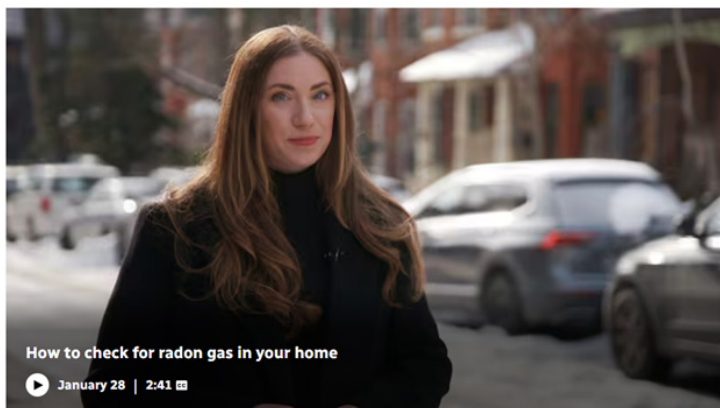

[Radon gas levels in homes need to be checked, lung cancer experts say](#)

Khoo's cancer was caught early enough for successful treatment, and he remains convinced that long-term exposure to those high radon levels in his home is what led it to develop in the first place.

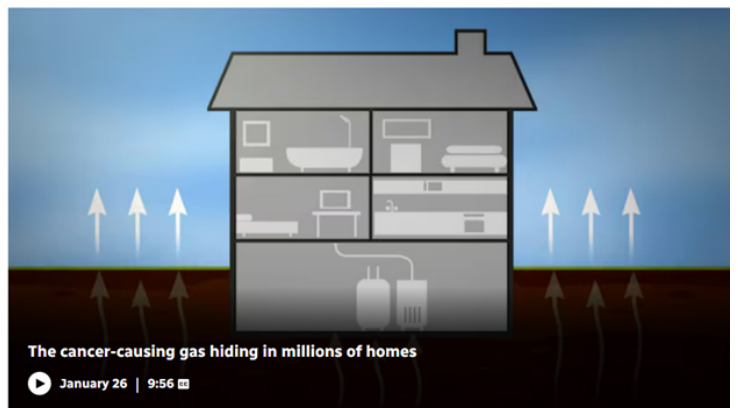

Alongside his cancer treatment, he also treated his house by installing a mitigation system.

"I think the cost of measuring radon is miniscule, relative to the scope of the problem," he said. "It's vital for every single homeowner to do that, to protect themselves and their families, because there's no other way you can find out if you're at risk."
